

Agile Business Analysis 101

Introducing Business Analysts and Project Managers to Agile

Agile Business Analysis 101 is focused on teaching the agile methodology specifically for Business Analysts and Project Managers. The best practices for agile are emphasized. This class is excellent for business analysts who are moving into the agile methodology or for leaders who are looking to improve their company's agile program.

Agile Business Analysis 101 presents the agile methodology from the unique perspective of utilizing business analysis for improvements. It provides real world examples and actionable insights into moving to agile or improving your agile program.

Agile Business Analysis 101 provides the foundation for any technology or business professional who wants to become knowledgeable and skilled in the basics of agile. More and more companies are finding that business analysts have a prominent place in a successful agile program. This course helps business analysts understand agile methodology and the standard terminology used while discussing the role that business analysis can play. Participants will learn about the agile manifesto contrasting key points with waterfall development practices while discussing the different roles played by business analysts in both. Specific topics covered include the agile sprint cycle, team roles, backlog creation and prioritization, iterative design, minimum viable product (MVP), definitions of done and ready (DOD, DOR), the estimation process including story points and team velocity, sprint retrospective and its role in the continuous improvement process, the agile view of releasing software, the customer feedback process, and writing good quality user stories. Best practices using agile business analysis are interwoven in discussion of these agile fundamentals. Whether you are a business analyst who is changing to agile or an agile leader who is looking for ways to improve their program, this class is for you.
